

Solid-liquid mixers

KommtMix™ belongs to the range of dissolution equipment suitable for the chemical and food industries. Such equipment ranges from continuous mixing systems to batch processing.

The solid-liquid continuous dissolvers KommtMix™-C are prepared to dissolve solids such as sugar, salt, and other raw materials. The internal configuration depends on the application and the product to be diluted.

The efficiency of batch systems KommtMix™-B, enables recirculation and reinjection of the diluted product. Its flow and injection point are subject to the products that must be dissolved.

All equipments are modular and adapt to the capacity required by the process. Like all equipment offered by the unit, they are provided with KommtSup™ control system for solid-liquid mixers.

The teams have a KommtSup™ control system that regulates the solid-liquid mixers.
